Survey Design and Mapping Recreational Use Trends on Olympic National Forest

Project Title	Survey Design and Mapping Recreational Use Trends on Olympic National Forest
Summary	Designing a system to survey users and map recreational use trends on the Olympic National Forest to help align us with Sustainable Recreation goals and meet the needs of our recreational users of today and tomorrow.
Country	United States

Project Description

Olympic National Forest is in the beginning phases of Sustainable Recreation and is looking to take a comprehensive at recreational use patterns of the Forest with the goal of developing a strategy for managing recreation resources now and into the future. We are looking at recreational visitation and use, recreational fees, and recreation site management. All of these components will tie into the larger strategy.

Current examples of establishing use trends rely on Human Ecology Mapping or social media location tagging, both are useful tools to help develop the picture...but is there another option? Join the Olympic National Forest to help us discover if there is, possibly creating a new tool to be used more broadly.

Required Skills or Interests

Skill(s)
Data analysis
Design thinking
Research
Survey / polling design
